Projects

Sell Solution (Team size: 6)

- An e-commerce portal that deals with selling multiple electronic gadget based products.
- Integrated Stripes for payment and implemented the checkout process in addition to developing reports for orders
- Created user walls to display the products added by the users, list of their followers and their posts, also designed the User Interface.

iMaze

- Worked in a team of four students to build a marble maze game, where the user aims to roll a marble through a maze within the time limit to reach the end, avoiding obstacles and collecting items along the way.
- On-boarded more than 5000 students by direct marketing in 10 colleges in one month.

Lyrics-Finder

- An online lyrics finder web application to find lyrics of any song across the world.
- Used the musixmatch API to get the tracks.
- Designed a friendly User Interface to interact with the app.

JavaLearn (Final Year Project)

- JavaLearn is a desktop application based on "3 tier architecture" in which the E-Learning system is implemented.
- This Desktop application is created using Java Language. Swing Components are used for designing purpose as well as coding.
- HTML and CSS are also used in some places for better GUI Implementation. Java API's are used to reduce code complexity.
- MySQL server is used for Backend purpose, where all the data of JavaLearn application is being stored.

React - TodoList app

- An online todo app where users can add todo's with different priority levels, for eg. low, medium and high
- Designed the user interface easy and simple for better interaction. User can delete, edit and add new todo's.
