AI Business Opetrations & Deployment Specialist

Company Description

Ismartu Technology BD Limited is a company dedicated to becoming a leading provider of smart devices and mobile services in global emerging markets. Our portfolio includes popular smart brands such as **TECNO, Infinix and itel**. ISMARTU is renowned for its commitment to delivering high-quality multi-brand smart devices and mobile Internet services through their self-developed operating system.

Job Summary:

This role focuses on implementing digital and AI-powered solutions across the company's retail, channel and sales operations in Bangladesh. Key responsibilities include data processing, analysis, system implementation and user support to ensure the effective adoption of the company's unified agent platform and related digital tools. The role also involves translating business requirements into practical, technology-driven solutions to improve operational efficiency and business processes.

Key Responsibilities:

- **On-site Research and Requirements Analysis:** Regularly visit retail stores, distributors and sales teams across Bangladesh to understand their daily business processes, operational requirements and practical challenges. Collect relevant on-site information, identify business gaps and document actionable requirements and issues.

- **Promotion and Implementation of Digital and AI Tools:** Learn and apply the company's unified agent platform and related digital tools. Support local implementation, conduct user training and provide daily hands-on guidance to help business personnel master and integrate these tools into their daily operations.

- **Business Data Analysis and Action Follow-up:** Analyze business data related to retail operations, sales performance, inventory movement, rebates and target-based incentives. Identify data trends, irregularities and potential operational issues, investigate possible root causes, and coordinate with business leaders to implement corrective actions and monitor improvement results.

- **Data Processing, Verification and Quality Improvement:** Collect, process and analyze business data from relevant systems and operational sources. Verify data completeness, accuracy and consistency, identify discrepancies and anomalies in relation to actual business scenarios and coordinate with relevant teams to ensure timely corrections and maintain reliable data records.

- **User Support and Issue Resolution:** Provide initial support to business users regarding digital tools, system usage and operational issues. Troubleshoot common technical and data-related problems, document unresolved issues, communicate them to the relevant national, regional lead or platform teams, and follow up until resolution and verification.

- **System Localization and Business Validation:** Identify and report issues related to system localization, including Bengali language support, local business processes, operational rules and exception handling. Participate in the testing and on-site verification of new features, updates and improvement initiatives to ensure their suitability for the Bangladesh market.

Application Deadline
14 November 2026

AI Business Opetrations & Deployment Specialist

- Documentation and Cross-team Collaboration: Prepare regular work reports, operational guidelines, user training materials and case studies. Communicate business requirements, project progress and operational feedback with Chinese and local teams in Chinese, English or Bengali, as required, and support the sharing of effective practices across teams.

- Data Security and Compliance: Handle business data, databases and system access permissions responsibly in accordance with company policies. Ensure compliance with applicable information security, data privacy, audit and business operational requirements.

Key Requirements:

- Bachelor's degree or above in **Computer Science, Computer Science and Engineering (CSE)** or a closely related discipline.
- **At least 2 years** of relevant experience in database management, data processing, data cleaning, data validation, data analysis, programming or other IT-related fields. **Fresh graduates with relevant skills** are also encouraged to apply.
- Basic data analysis skills, with the ability to identify data anomalies, investigate their underlying causes and relate findings to actual business and operational scenarios.
- Interest in digital and AI tools, with the ability to quickly learn new platforms and apply them to practical business scenarios.
- **Willingness to frequently travel locally** and engage directly with retail stores, distributors and frontline business teams.
- Excellent communication, training and coordination skills, with the ability to address front-line users' questions and usage barriers, and promote the continuous adoption of new tools.

Required Skills

- Basic knowledge of programming languages such as Python, Java, C++ or similar languages.
- Basic knowledge of databases and SQL, with the ability to retrieve, filter and manage data for analysis and reporting.
- Proficiency in Microsoft Excel and familiarity with data visualization or reporting tools.

Additional Requirements

- Candidates who are familiar with retail operations, channel operations, sales support, store supervision, system implementation or promotion will be prioritized.
- Chinese language proficiency will be an added advantage.
- Familiarity with AI tools, Agent platforms, automation or emerging digital technologies.
- Exposure to CRM, DMS, ERP or other business management systems.
- Experience in the mobile phone, consumer electronics, FMCG or distribution industries is preferred.

Compensation & Other Benefits:

- Salary: Negotiable
- Other Benefits: T/A, Mobile bill, Performance bonus, Provident fund, Insurance, Gratuity, Medical Allowance.
- Salary Review: Yearly
- Festival Bonus: 2
- Workplace: Work at office
- Employment Status: Full Time
- Job Location: Gulshan 2, Dhaka
